

The electric industry restructuring law passed in 1997 by the Illinois General Assembly provides many benefits for all customers. In compliance with this law, electric utilities and suppliers provide an Environmental Disclosure Statement for the 12 months ending every quarter.

The information in this statement shows the breakdown of the different sources that generated electricity for ComEd customers and the average amounts of emissions and nuclear waste produced, between July 1, 2009 and June 30, 2010.

In addition to the electricity sources shown on the table and pie chart, ComEd also purchased renewable energy certificates (RECs) in the spring of 2008, 2009 and 2010 to fulfill its obligation under the Illinois Renewable Portfolio Standard. RECs represent the beneficial environmental attributes associated with renewable generation resources such as wind, hydroelectric, biomass and solar. One REC is created for each megawatt hour of energy produced by a renewable generator. In 2008, ComEd procured a total of 796,040 RECs, of which approximately 72 percent were from wind generators located in Illinois and in

nearby states. In 2009, ComEd procured a total of 1,564,360 RECs, 75 percent of which were from wind generators located in Illinois. In 2010, ComEd procured a total of 1,887,014 RECs, 80 percent of which were from wind generators located in Illinois.

55 Million Pounds of Emissions Removed through Appliance Recycling

Since its launch in June 2008, ComEd's *Smart Ideas*SM Appliance Recycling has helped customers remove more than 45,000 inefficient, working appliances from their homes and recycle them responsibly.

This initiative voluntarily follows the U.S. Environmental Protection Agency's Responsible Appliance Disposal (RAD) protocol for recycling, which uses best practices to remove all ozone-depleting materials and refrigerants from refrigerators, freezers and room air conditioners. ComEd's *Smart Ideas* Appliance Recycling not only helps the environment, it has also reduced carbon dioxide (CO₂) emissions by an estimated 55 million pounds.

Appliance Recycling got a boost this summer with the appearance of ComEd's Fine Art Fridges display along Michigan Avenue in Chicago. The display, which ran Aug. 2 through Sept. 15, featured recycled refrigerators transformed into works of art by Chicago-area artists. During the first week of display the number of customers enrolling in Appliance Recycling increased by 11 percent.

For more information on the Fine Art Fridges display, visit ComEd.com.

Environmental Disclosure Information

Twelve Months Ending June 30, 2010

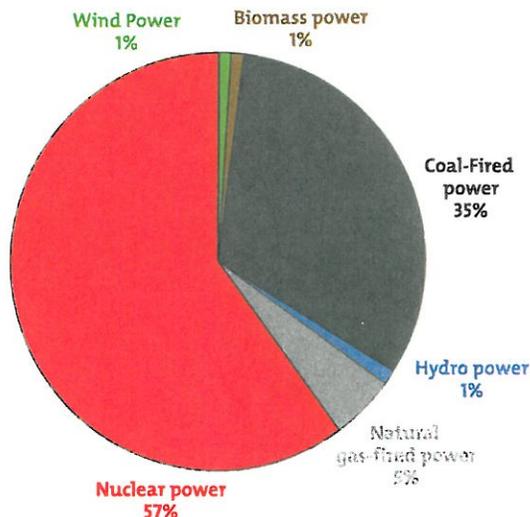

The information contained in the Environmental Disclosure Statement is required by the Electric Service Customer Choice and Rate Relief Law of 1997 and the rules of the Illinois Commerce Commission.

ComEd's Environmental Disclosure Statement

The disclosure of this information is required under Section 16-127 of the Electric Service Customer Choice and Rate Relief Law of 1997 and the rules of the Illinois Commerce Commission, 83 Ill Adm. Code 421.

Sources of Electricity Supplied for the 12 months ending June 30, 2010	Percentage of Total
Biomass power	1%
Coal-fired power	35%
Hydro power	1%
Natural gas-fired power	5%
Nuclear power	57%
Oil-fired power	0%
Solar power	0%
Wind power	1%
Other resources	0%
Unknown resources purchased from other companies	0%
TOTAL	100%

Sources of Electricity Supplied for the 12 months ending June 30, 2010

AVERAGE AMOUNTS OF EMISSIONS ² and AMOUNT OF NUCLEAR WASTE ³ per 1000 kilowatt-hours (kWh) PRODUCED FROM KNOWN SOURCES for the 12 months ending June 30, 2010	
Carbon dioxide	776.24 lbs.
Nitrogen oxides	1.18 lbs.
Sulfur dioxide	3.84 lbs.
High level nuclear waste	0.006 lbs
Low level nuclear waste	0.0004 cubic feet

¹ These figures constitute the aggregation of information provided by ComEd's wholesale energy suppliers, most of whom have indicated that their source is the "PJM system mix." The PJM system mix is the collective generation produced within the PJM Interconnection, which is the regional transmission organization that maintains the safety, reliability, and security of the transmission system and operates an efficient and effective wholesale electric market in 13 states and the District of Columbia. ComEd's electric service territory is within the PJM footprint.

² The source for the baseline emissions data for the portion of the emissions that are associated with PJM system mix is PJM Environmental Information Services, Inc., (www.pjm-eis.com). For energy that is sourced from the PJM system mix, emissions rates are calculated using the most current emissions data from the Quarterly PJM System Mix by Fuel Reports. These reports exclude the effects of energy imports, exports, external generation and behind-the-meter generation. Those quarterly reports also exclude the effects of any claims on any specific component(s) of the mix.

³ Nuclear Waste rates were calculated based on Generation Net for Sale.
