

## **CROSSING SAFETY IMPROVEMENT PROGRAM**

FY 2011-2015 Plan

**PROPOSED GRADE CROSSING PROTECTION FUND  
PROJECTS FOR LOCAL ROADS AND STREETS**

ILLINOIS COMMERCE COMMISSION  
APRIL 2010

## INTRODUCTION

The Illinois Commerce Commission (ICC) has the statutory responsibility to improve safety at public highway-rail crossings in the State of Illinois. Currently, there are 7,981 highway-rail grade crossings in Illinois, of which 792 are on state roads, and 7,189 are on local roads. There are 2,775 highway-rail grade-separated crossings (bridges) in the state. Another 4,797 grade crossings and 163 bridge structures are located on private property, and are not under the jurisdiction of the state. There are also 394 pedestrian grade crossings and 91 pedestrian grade separated crossings (bridges) in Illinois. Nationally, Illinois is second only to Texas in the total number of highway-rail crossings. Table A summarizes the distribution of public highway-rail crossings by type and position.

**Table A**  
**Illinois Public Highway-Rail Crossings**

<b>Crossing Type</b>	<b>Crossing Position</b>	<b>Crossings</b>
Public Roadway	At-Grade	7,981
	RR Over	1,815
	RR Under	960
Public Pedestrian Pathway	At-Grade	394
	RR Over	60
	RR Under	31
<b>Total</b>		<b>11,241</b>

The ICC orders safety improvements at public highway-rail crossings with the cost of such improvements paid by the state, the railroads, and local governments. On state roads, the Illinois Department of Transportation (IDOT) pays the majority of the costs through the State Road Fund. For local roads, the Illinois General Assembly created the Grade Crossing Protection Fund (GCPF) to pay the majority of the costs of improvements.

## RAILROAD CROSSING SAFETY — THE THREE E's

Illinois is one of the key transportation hubs in the nation. With approximately 7,300 miles of railroad track, its rail system is the country's second largest, including the largest rail freight hub in Chicago. Illinois has the nation's third largest highway system, with 139,940 miles of highways, streets and roads and over 26,400 bridges.

Both the rail and highway systems are among the most heavily used in the nation in terms of volume of traffic, with much of the traffic concentrated in the Chicago metropolitan region. There, the urban mass transit system serves an average of nearly 600 million passengers a year over an extensive network of bus and rail routes.

Keeping the grade crossing portion of this transportation network operating safely and efficiently involves local, state and federal governments as well as the private sector. These safety efforts can be summarized as the Three E's - **Education, Engineering and Enforcement.**

**Education:** The ICC is actively involved in developing programs to educate the public about the danger at grade crossings. One example of this public education program is the ICC's participation in Operation Lifesaver. The Operation Lifesaver program is a public-private partnership designed to increase public awareness of highway-rail grade crossing hazards. It also strives to improve driver and pedestrian behavior at railroad crossings by encouraging compliance with traffic laws relating to crossing signs and signals.

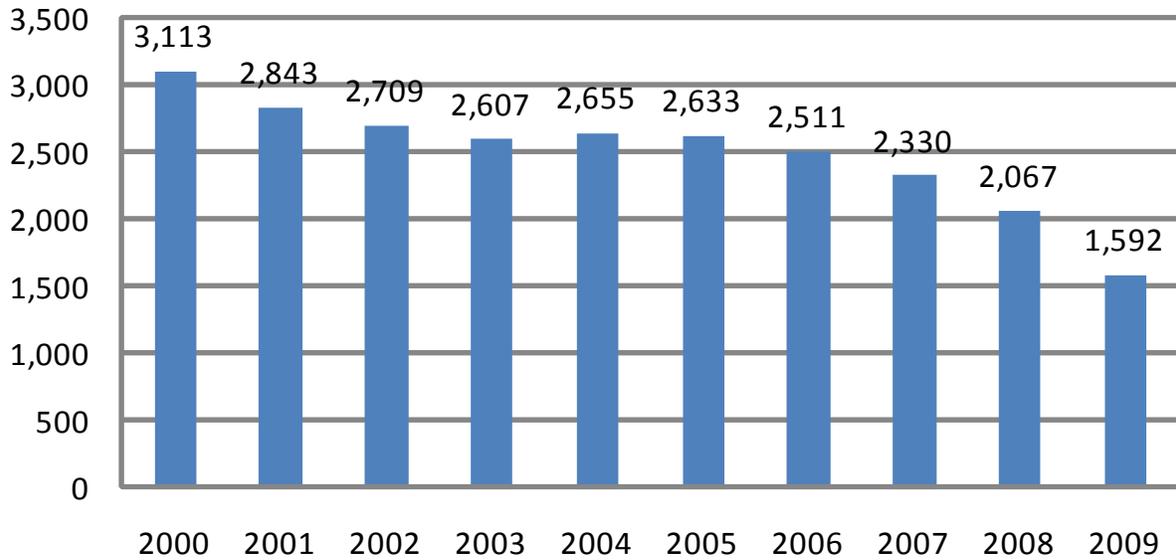

**Enforcement:** Enforcement of existing traffic and trespass laws is key, especially the issuance of fines (up to \$500) or community service to persons crossing railroad tracks after the warning signals have activated.

**Engineering:** Grade crossing safety improvements are also critical to reducing collisions. The ICC orders physical and system improvements, including the installation and upgrading of grade crossing warning signs and signals and, where warranted, grade separations. While education and enforcement are absolutely essential, the focus of this report is the engineering of capital improvements to further railroad crossing safety on local roads.

## **2009 IN REVIEW - Collision and Fatality Rates**

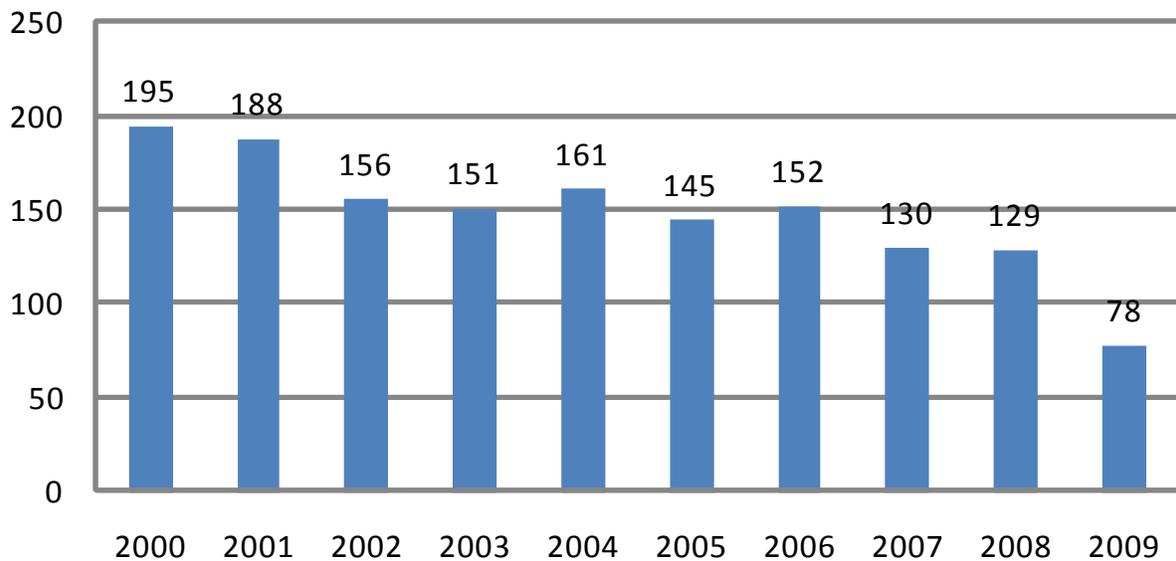

In 2009, preliminary statistics indicate there were 78 collisions at public crossings in Illinois, a 40% decrease compared to 2008 figures. National preliminary figures compiled by the Federal Railroad Administration (FRA) for 2009 indicate 1,592 collisions occurred, compared to 2,067 in 2008, which is a 23% decrease. As can be seen from the following charts, the trend both nationally and in Illinois is a steady decrease in collisions, except between 2003 and 2004, when there was a marked increase in collisions year over year.

**10 Year Trend in Collisions at Public Crossings: USA**  
 (Note: Data Provided by the Federal Railroad Administration)

[Note: Annual collision totals provided by the Federal Railroad Administration. Due to FRA's ongoing efforts to obtain the most accurate information, the data is subject to change.]

**10 Year Trend in Collisions at Public Crossings: Illinois**  
 (Note: Data Provided by the Federal Railroad Administration)

[Note: Annual collision totals provided by the Federal Railroad Administration. Due to FRA's ongoing efforts to obtain the most accurate information, the data is subject to change.]

The general public commonly thinks of grade crossing collisions as involving trains colliding with cars, and in a majority of incidents that is the case. However, each year a substantial number of collisions involve motor vehicles driving into the sides of trains. In 2009, 28% of all collisions involved cars driving into the sides of trains, a percentage which has remained fairly constant over the years. The 22 vehicle-train collisions in 2009 resulted in 2 fatalities and 12 injuries.

Total fatalities resulting from collisions at highway-rail crossings in Illinois decreased from 25 in 2008 to 16 in 2009. Fatality statistics, however, are not a particularly good measure of safety. Fatalities are a function of random events, such as how many occupants were riding in a car involved in a collision, or multiple fatalities involved in the same incident (as in the death of eleven passengers involved in the Amtrak/steel truck collision that occurred near Bourbonnais, in 1999). Table B illustrates the distribution of fatalities by collision type in 2009.

**Table B**  
**Illinois Highway-Rail Grade Crossing Collisions**

Type of Collision	Total Collisions	Fatal Collisions	Total Fatalities
Train Struck Vehicle	47	6	9
Vehicle Struck Train	22	2	2
Pedestrian	9	5	5
<b>Total</b>	<b>78</b>	<b>13</b>	<b>16</b>

Note: There was one double fatal and one triple fatal collision in 2009.

## **RAILROAD CROSSING SAFETY FUNDING**

The Grade Crossing Protection Fund (GCPF), appropriated to the Illinois Department of Transportation but administered by the ICC, was created by the General Assembly to assist local jurisdictions (counties, townships and municipalities) in paying for safety improvements at highway-railroad crossings on local roads and streets only. Assistance from the GCPF cannot be used for safety improvements at highway-rail crossings located on the state road or highway system. Those improvements are paid for by the Illinois Department of Transportation. Beginning with fiscal year 2010, each month \$3.25 million in state motor fuel tax receipts is transferred from the Motor Fuel Tax (MFT) fund to the Grade Crossing Protection Fund. This amount provides the GCPF with \$39 million annually to be used for safety improvements at highway-rail crossings on local roads and streets. The GCPF is typically used to help pay for the following types of projects:

- **Warning Device Upgrades:** Installation of automatic flashing light signals and gates at public grade crossings currently not equipped with automatic warning devices; installation of automatic flashing light signals and gates at public grade crossings currently equipped only with automatic flashing light signals; signal circuitry improvements at public grade crossings currently equipped only with automatic warning devices;
- **Grade Separations - New and Reconstructed:** Construction, reconstruction, or repair of bridges carrying a local road or street over railroad tracks (overpass); construction, reconstruction, or repair of bridges carrying railroad tracks over a local road or street (subway);
- **Grade Separations - Vertical Clearance Improvements:** Lowering the existing highway pavement surface under a railroad bridge to improve vertical clearance for motor vehicles;
- **Pedestrian Grade Separations:** Construction of a bridge to carry pedestrian/bicycle traffic over or under railroad tracks;
- **Interconnects:** Upgrading the circuitry at grade crossings where warning signals are connected to the adjacent traffic signals so that the two systems operate in a synchronized manner;
- **Highway Approaches:** Improvements to the portion of the public roadway directly adjacent to the crossing surface;
- **Connecting Roads:** Construction of a roadway between a closed crossing and an adjacent open, improved crossing;
- **Remote Monitoring Devices:** Sensor devices in the circuitry of grade crossing warning devices which immediately alert the railroad to any failures in warning device operations;
- **Low Cost Improvements at Unsignalized Crossings:** Installation of new, more reflective Crossbuck warning signs and YIELD signs at crossings that do not require automatic warning devices;
- **Crossing Closures:** Provide an incentive payment to local agencies for the voluntarily closure of public highway-rail grade crossings; and
- **Crossing Surface Renewals:** Up to \$2 million in assistance annually can be allocated for crossing surface improvements.

The cost of railroad crossing safety improvements varies substantially depending on the nature of the work undertaken. A standard installation of gates with automatic flashing light signals on a two-lane road typically costs approximately \$160,000-\$300,000. Additional costs for road improvements could typically range from \$2,000 to \$150,000 depending on the road type and location. Grade separation structures are very costly. The GCPF has made contributions to pavement lowering (vertical clearance improvements) projects costing \$35,000 - \$3 million, and new underpass structures costing as much as \$45 million. Bridges over railroads can cost from \$600,000 for a rural structure to \$40 million for a multi-lane multi-railroad urban structure. Typically, the ICC authorizes contributions from GCPF that pay up to 60% of the cost for grade separation projects and 85% to 95% for grade crossing improvements, although ICC policy is to allocate no more than \$12 million from the GCPF to any individual project unless unusual circumstances warrant otherwise. When the numbers of crossing locations needing improvement are multiplied by project costs, the problem of allocating sufficient assistance from the GCPF becomes apparent.

## CROSSING SAFETY IMPROVEMENT PROJECTS

This report presents the railroad crossing safety capital improvements that ICC staff proposes to implement during FY 2011, and also looks ahead to the projects contemplated for FY 2012-FY 2015. In all cases it is assumed that any required local funding match will be available. In some cases local funding may not be available during the same fiscal year in which a crossing improvement has been programmed. In those circumstances the Rail Safety Section staff will recommend to the ICC that assistance from the GCPF for the project be reallocated to another fiscal year to accommodate the local agency.

The ICC receives numerous requests from local communities and railroads for assistance from the Grade Crossing Protection Fund for safety improvements at public highway-rail crossings. During development of each multi-year crossing safety improvement program plan, the large number of potential projects requires the ICC to prioritize projects based upon several criteria, including the relative safety of the existing crossing and the volume and types of existing train and highway traffic. After each potential project is prioritized based on engineering requirements, geographic location is also taken into account so that safety improvements throughout the state can be addressed as equitably as possible. Projects not selected for the Plan are considered again as part of future 5-Year Plans.

The project list for Fiscal Year (FY) 2011 (July 1, 2010 through June 30, 2011) includes capital improvement projects that local governments or railroads have previously submitted to the ICC for evaluation and approval, as well as projects based on established priorities. The project list for FY 2012-2015 (out-year list) includes projects based on a continued effort to meet those established priorities:

- **High Collision History** - Each year the ICC places a high priority on upgrading public highway/rail grade crossings that have a pronounced history of train/vehicle collisions, or that have a high predictive value for future collisions. The FY 2011-2015 Plan will address safety improvements at as many of these crossing locations as possible.
- **Rail Corridors** - The ICC has identified as a priority the need to improve public highway/rail grade crossings in rail corridors where conventional speed passenger trains operate.
- **Highway and Pedestrian Grade Separations (Bridges)** - The ICC is continually seeking locations where grade crossing blockages cause substantial motorist or emergency vehicle delay, or where heavy vehicular traffic represents a heightened threat of train/vehicle collisions. This Program includes funding assistance for numerous highway/rail bridge projects on local roads and streets throughout the state.

- **Interconnected Crossings** - The ICC and IDOT are continuing a program to identify and improve highway-rail grade crossings that require the interconnection of crossing warning signals with traffic control signals at adjacent highway intersections.

**FY 2011 PLAN**

Projects programmed for submittal to the ICC in FY 2011 are listed in Appendix 1. In FY 2011 it is anticipated the ICC will consider projects requiring commitments from the GCPF totaling \$39 million, including \$18 million for bridge projects.

In FY 2011, the ICC will also set aside \$5 million from the GCPF in contingency funds to address emergency projects, which may require rapid resolution; experimental crossing safety projects; low-cost safety improvements at multiple crossings; and incentive payments to local agencies for the voluntary closure of public highway-rail grade crossings. It is anticipated that in the next four years the contingency funds will be used to help pay for low-cost improvements (installation of new warning signs, for example) involving approximately 200 crossings not currently equipped with automatic warning devices (i.e., “passive” crossings). The contingency funds will be also be used to modify existing remote monitoring devices at approximately 50 crossings that are equipped with active warning devices. Modifications to the remote monitoring devices are necessary due to the phasing out of analog cellular networks. Also, \$2 million has been set aside for projects involving the renewal of crossing surfaces on the local highway system. These projects are summarized in Table C.

<b>TABLE C</b>		
<b>FY 2011 Projects by Project Type</b>		
<b>Total Estimated Assistance from the GCPF</b>		
<b>PROJECT TYPE</b>	<b>CROSSINGS</b>	<b>\$MILLIONS</b>
Bridge Projects	5	18.2
Grade Crossing Improvement Projects	38	9.0
Progress Payments	1	6.9
Low-Cost Emergency Projects; Experimental Projects; Voluntary Crossing Closure Incentive Payments; Surface Renewal	400 (Est) <sup>1</sup>	5.0
<sup>1</sup> (Exact number of crossings in this category yet to be determined)		
<b>Total</b>	<b>444 (Est)<sup>1</sup></b>	<b>39.1</b>

**NOTE:** At the time the FY 2011 portion of the Plan was prepared, assistance from the GCPF was available for each project noted in Appendix 1. However GCPF contributions may cease for certain projects should the General Assembly fail to appropriate, or otherwise not make available, sufficient funds.

## FY 2012 - 2015 PLAN

Projects programmed for submittal to the ICC in FY 2012-2015 are listed in Appendix 2. For those four years, it is anticipated the ICC will consider projects requiring commitments from the GCPF totaling over \$157 million, affecting approximately 1,800 crossings in over 63 counties. In addition, \$20 million from the GCPF will be set aside in contingency funds during FY 2012-2015. These projects are summarized in Table D.

<b>TABLE D</b>		
<b>FY 2012-15 Projects by Project Type</b>		
<b>Total Estimated Assistance from the GCPF</b>		
<b><u>PROJECT TYPE</u></b>	<b><u>CROSSINGS</u></b>	<b><u>\$MILLIONS</u></b>
Bridge Projects	20	81.3
Grade Crossing Improvement Projects	188	48.0
Progress Payment	1	8.1
Low-Cost Emergency Projects; Experimental Projects; Voluntary Crossing Closure Incentive Payments; Surface Renewal	1,600 (Est) <sup>1</sup>	20.0
<sup>1</sup> (Exact number of crossings in this category yet to be determined)		
<b>Totals</b>	<b>1,809 (Est)<sup>1</sup></b>	<b>157.4</b>

**NOTE:** At the time the FY 2012-2015 portion of the Plan was prepared, assistance from the GCPF was available for each project noted in Appendix 2. However GCPF contributions may cease for certain projects should the General Assembly fail to appropriate, or otherwise not make available, sufficient funds.

## ACTIVE PROJECTS

The ICC has previously issued Orders that authorize over 121 safety improvement projects, involving over 1,600 crossings in over 42 counties throughout the state. These projects are summarized in Table E below. Appendix 3 lists each individual project with specific location and cost information.

<b>TABLE E</b>		
<b>Active Projects by Project Type</b>		
<b>Amount of GCPF Assistance Approved by the ICC</b>		
<b><u>PROJECT TYPE</u></b>	<b><u>CROSSINGS</u></b>	<b><u>\$MILLIONS</u></b>
Bridge Projects	15	63.4
Grade Crossing Improvement Projects	113	19.3
Low-Cost Emergency Projects; Experimental Projects; Voluntary Crossing Closure Incentive Payments	1,502	1.3
<b>Totals</b>	<b>1,630</b>	<b>84.0</b>
